

**16.04.2012 № 120416-A01****To the President  
of the United States of America  
Mr. Barack Hussein Obama II****On the participation of the U.S. in the  
promising YACONTO International Program  
through the implementation of the Project-A****Dear Mr. President !**

YACONTO LLC (Russia, Moscow) is preparing to implement the large-scale multidisciplinary YACONTO International Program, which consists of projects and programs that open up prospects for the world.

An integral part of the YACONTO International Program is the non-state investment YACONTO Integrated Program for the construction, in Southern Russia (Tuapse region, Krasnodar Territory), of a modern “Commercial Black Sea port YACONTO” for the transshipment of over 100 million tons of cargo per annum, with its common production, transport and social infrastructure. The YACONTO Integrated Program, as per the YACONTO List of Projects of 09.05.2005, also includes the establishment of a Tuapse Naval Base as a reserve or main basing point for the Russian Black Sea Fleet, so that a partial of a full withdrawal of warships from Sevastopol (Ukraine) can be accomplished.

Construction of the YACONTO Port with its common infrastructure, and the construction of a new modern navigable waterway in parallel to the existing, overloaded traffic artery between the straits of Bosphorus and Dardanelles, proposed for implementation in Turkey, will effectively complement each other. Moreover, the construction of a new deep-water canal between the Mediterranean and Black seas will provide simultaneous passage of ships in both directions, and double the freight volume.

A new navigable waterway in Turkey will create demand and favorable conditions for the construction of a modern navigable canal between the Azov and Caspian seas in Russia. This canal will be located south of the navigable Volga-Don canal and will be 340 km shorter than the latter. The new canal in Southern Russia will dramatically increase traffic flows and economic effect for the countries of Azov-Black Sea and Caspian Sea basins, as well as for other interested states and individuals.

Implementation of the YACONTO Comprehensive Program for the socio-economic development of Iran, which includes the construction of a navigable canal between the Persian Gulf and the Caspian Sea, is promising for the U.S. itself, as it creates conditions for normalizing relations between the U.S. and Iran.

Construction of navigable canals with a developed infrastructure in Turkey, Russia and Iran will create a loopback transport line, which connects the Indian Ocean, the Gulf of Aden, the Red Sea, the Mediterranean Sea, the Azov-Black Sea basin, the Caspian Sea, the Persian and Oman gulfs and the Arabian Sea. And this is merely a fraction of the unparalleled planetary-scale YACONTO International Program.

YACONTO LLC has also developed the Project-A to restore the status quo of Atomash OJSC (Volgodonsk, Rostov region), which used to be the flagship of Russian nuclear industry and was intentionally bankrupted by an organized group of interested officials who acted in the interests of their monopoly business partners. Concern YACONTO JSC (Russia, Moscow) owned a 28.5% stake in Atomash OJSC, hence, as a result of the bankruptcy of the Russian industrial giant, both the state (which owned a 30% stake) and Concern YACONTO JSC (the full successor of which is YACONTO LLC) were illegally deprived of their property.

Implementation of Project-A will provide a successful solution of problems and challenges faced by Russia in the interests of the state, society and business. Implementation of Project-A will restore the status quo of Atomash OJSC and bring back 30% of its shares to the State; all perpetrators will compensate for the damage caused to the aggrieved party in Russia and abroad; the State will accumulate the controlling stake in Atomash OJSC by exchanging the 28.5% interest owned by YACONTO LLC for property agreed with investors and business partners; accounts payable to the third parties will be repaid; the interest in Atomash OJSC accumulated by the State and other assets may be transferred to an appropriate trust authorized by the State to develop nuclear engineering and implement socio-economic programs for the benefit of Russia and the West.

However, the activities of YACONTO LLC in Russia are being actively opposed by cynical, hypocritical and irresponsible before the Law corrupt officials from the enormous staff of state authorities, which is out of control and serves the interests of the ruling elite and their monopoly business partners. At the same time, my Constitutional Rights as the Citizen of Russian Federation and a Proprietor of YACONTO LLC are unlawfully violated, since I was deprived of material goods and intellectual property through premeditated bankruptcies of large industrial enterprises with the opportunistic complicity of officials and a whole army of their supporters from law enforcement, supervisory and regulatory agencies, and courts in Russia, linked by mutual responsibility. More information about flagrant violations of the European Convention on Human Rights in Russia in relation to me, and other respective materials and documents can be found on: [WWW.YACONTO.RU](http://WWW.YACONTO.RU).

**Dear Mr. President, I respectfully ask you to support the unprecedented YACONTO International Program through the implementation of the Project-A before the international community and world's leading companies in geopolitical and geo-economic interests of the civilization on Earth.**

**Attached:** Set of documents.

**Respectfully yours,**

**President of YACONTO LLC**

**Sergey P. Yakunin**
