Dear Aleksandr Aleksandrovich!

In response to your question we inform you that it's most expedient to provide water supply to the infrastructure of «Black Sea commercial port YACONTO» in Tuapse region of Krasnodar Territory by connecting to the reconstructed and extensible water intakes of the settlements of Tuapse region and Tuapse city in the valleys of Tuapse river and its tributaries.

Additional volume of drinking quality water of 10 thousand m³/day can be obtained through implementation of one of the options of the water withdrawal intensification Scheme developed by PO «ROSTOBLVODOKANAL» group of authors and approved in 1991 by competent organizations.

The Scheme currently requires partial correction due to the introduction of new regulations and legislation.

Correction of the Scheme and development of the design and study documentation of «Draft» stage (with an approvable part) of the offsite water supply of «YACONTO Port» facilities can be conducted with the involvement of FSUE «North Caucasian Giprokommunvodokanal».
