From 14.03.2008 № 35

Dear Sergey Pavlovich!

FSUE «Tuapseberegozaschita» considers the non-state investment YACONTO Integrated Program of federal and nationwide significance, which consists of major promising projects and programs as per the YACONTO List of Projects from 09.05.2005, to be in line with the interests of the development of Tuapse region, the city of Tuapse and Krasnodar Territory as a whole.

FSUE «Tuapseberegozaschita» considers the following several options for the utilization of rock excavated during the creation of the “YACONTO Port” and the TNB:

- Mounding of the coastline for its expansion and consolidation to create full-scale wave dissipation beaches;
- Creation of artificial coastal land for the establishment of world class resorts;
- Coarse material for stone constructions ensuring the unimpeded passage of water of the regional rivers;
- Partial usage of marl which meets the requirements of GOST standards for the production of cement;
- Partial usage of crushed stone for the construction of roads.

Final choice on the usage and location of rock on the proposed territories can be made after the respective ecological and environmental studies.

FSUE «Tuapseberegozaschita» is a federal state enterprise, specializing in design and research projects around construction, anti-landslide and bank protection works.

The leadership of FSUE «Tuapseberegozaschita» is ready for a mutually beneficial partnership for the implementation of YACONTO Integrated Program.

Respectfully yours,

**Director of FSUE
«Tuapseberegozaschita»**

N.M. Bannikov
